

KEY ISSUES:

Living where wildfires can occur, puts our homes at risk, but it is possible to live safely and resiliently with wildfire. The choices we make with our homes and everything that surrounds it out to 100 metres from the foundation will have the biggest impact in reducing the vulnerability.

What factors contribute to the vulnerability of your yard?

- Storing items such as firewood piles, construction materials, patio furniture, tools and decorative pieces against or near a house is a major fire hazard.
- Combustible landscaping mulch will produce embers that can ignite combustible materials and increase the chance of direct flame spreading to the home.
- Evergreen trees (with cones and needles) are highly flammable and should not be within 10 metres of your home.

Consider these guidelines when planning updates to your yard and with your ongoing property maintenance:

- A 1.5 metre non-combustible surface should extend around the entire home and any attachments, such as decks to reduce the chance of wind-blown embers igniting materials near your home.
- Use non-combustible materials such as gravel, brick, or concrete in this critical 1.5 metre area adjacent to your home. Woody shrubs, trees or tree branches should be avoided in this area; any that are present should be properly mitigated
- Plant only a low density of fire-resistant plants and shrubs within 10 metres of your home.
- Do not use bark or pine needle mulches within 10 metres of your home as they are highly combustible. Gravel mulch and decorative crushed rock mulch significantly reduce the risk of wildfire.
- A mowed lawn is a fire resistant lawn. Grasses shorter than 10 centimetres in height are less likely to burn intensely.
- Move firewood piles, stored trailers/recreational vehicles, storage sheds, and other combustible materials a minimum of 10 metres from your home.
- Regularly clean up accumulations of fallen branches, dry grass and needles from on the ground to eliminate potential surface fuels.
- Remove all branches to a height of 2 metres from the ground on evergreen trees within 30 metres of your home.
